EgySpy

Use Case List

Requirements Gathering — Task 12

Prepared by: Omar Moharm | Status: Draft for team validation

1. Purpose

This document converts the available EgySpy stakeholder register and user stories into a traceable, reviewable use case list. Each entry identifies a goal, primary actor, MoSCoW priority, and the user story or stories that support it. This is a working draft, not evidence of team approval.

2. Scope and Modeling Rules

- EgySpy supports management visibility into employee movement within a defined facility during working hours, including visited zones and time spent in them.
- EgySpy does not determine whether an employee is actually performing assigned work. It reports movement and flags possible deviations for human review.
- EgySpy is not a general attendance system; the current user stories describe it as starting after attendance has been recorded.
- Tracking technology, architecture, detailed access-control policy, privacy arrangements, and several operational parameters remain undefined in the source documents.
- Only Management / Direct Manager is confirmed as a system user. Employees are monitored people, not system users under the current decision. HR Officer, Security Officer, and System Administrator are provisional roles requiring team confirmation.
- Priorities are copied from the user stories: Must, Should, and Could. Values written as TBD remain unresolved and must not be treated as approved thresholds.

3. Actor Register for Use Case Review

Actor ID	Actor	Confirmation status	Goal / responsibility described in source
ACT-01	Direct Manager / Management	Confirmed system user	Views live team movement, reviews zone visits and alerts, and checks summaries.
ACT-02	Employee	Affected person; not a system user	Needs tracking limited to facility and working hours, transparency, and a correction-request process.
ACT-03	HR Officer	Provisional — team confirmation required	Potentially reviews history, deviation reports, attendance reconciliation, escalations, and flagged events.
ACT-04	Security Officer	Provisional — team confirmation required	Potentially investigates suspicious location data, restricted-zone events, and audit records.
ACT-05	System Administrator	Provisional — team confirmation required	Potentially manages zones, assignments, alert rules, users, access, devices, and retention settings.
ACT-06	Responsible Reviewer	Unassigned role / process owner TBD	Would handle employee correction requests and confirm or dismiss flagged events; ownership must be defined.

4. Use Case List

The following list is intentionally comprehensive so every source user story can be traced. Some entries represent cross-cutting system behavior or a process rather than a user-triggered interaction; these are explicitly marked and should be reviewed during team validation.

4.1 Live Monitoring, Zones, and Alerts

UC ID	Use case / goal	Primary actor	Priority	Traceability	Validation notes
UC-01	View live team locations Goal: See current zones for employees assigned to the manager's team during working hours.	Direct Manager	Must	US-01	Confirmed actor; confirm TBD-1 update delay.
UC-02	View employee zone status Goal: Identify whether an employee is in an assigned zone, outside it, or has unavailable location data.	Direct Manager	Must	US-02	Confirmed actor; confirm TBD-2 unavailable threshold.
UC-03	View facility map Goal: View identifiable employees in their current zones on a configured facility map.	Direct Manager	Should	US-03	Map/layout configuration details remain open.
UC-04	Search and filter employees Goal: Find employees by name, department, or zone while respecting access restrictions.	Direct Manager; HR Officer (provisional)	Should	US-04	HR actor requires confirmation.
UC-05	Define facility zones Goal: Create named facility zones with boundaries and deactivate rather than delete zones already used by assignments or history.	System Administrator (provisional)	Must	US-05	Administrator role and zone-boundary approach require confirmation.
UC-06	Assign expected zones to employees Goal: Assign one or more expected zones to an employee from an effective date; identify employees with no assignment.	System Administrator (provisional)	Must	US-06	Administrator role and assignment rules require confirmation.
UC-07	Review zone visits and duration Goal: Review employee zone entry/exit times, durations, open visits, and confidence indicators for uncertain or missing readings.	Direct Manager	Must	US-07	Confirm TBD-9 accuracy threshold and event-handling rules.
UC-08	Manage temporary zone reassignment Goal: Temporarily allow an employee to work in another zone for a defined start/end window without generating a deviation alert during that window.	Direct Manager	Should	US-08	Confirm who can approve reassignment and any audit requirements.
UC-09	Receive and review out-of-zone alerts Goal: Receive an alert when an employee remains outside the assigned zone beyond the configured limit and review the supporting details.	Direct Manager	Must	US-09	Confirm TBD-3 alert threshold and TBD-4 delivery target.
UC-10	Acknowledge and escalate alerts Goal: Record acknowledgement and a note; route an unacknowledged alert to HR after	Direct Manager; HR Officer (provisional)	Should	US-10	Confirm HR role and TBD-5 escalation period.

UC ID	Use case / goal	Primary actor	Priority	Traceability	Validation notes
	the defined period.				
UC-11	Configure alert thresholds Goal: Configure valid alert thresholds by zone or employee group without rewriting past alerts.	System Administrator (provisional)	Should	US-11	Administrator role and permitted rule scope require confirmation.
UC-12	Receive restricted-zone alerts Goal: Receive an alert when an employee without permission enters a restricted zone.	Security Officer (provisional)	Could	US-12	Security role and definition of permissions/restricted zones require confirmation.
UC-13	Receive tracking-device health alerts Goal: Identify low battery or silent devices and avoid counting silent periods as time outside an assigned zone.	Direct Manager and/or System Administrator (provisional)	Should	US-25	Confirm responsible recipient, TBD-10 battery threshold, and TBD-2 silence threshold.

4.2 History, Reports, Integrity, Access, and Privacy

UC ID	Use case / goal	Primary actor	Priority	Traceability	Validation notes
UC-14	Review movement history Goal: Retrieve ordered zone visits for an employee and date range within the retention period.	HR Officer (provisional)	Must	US-13	HR role and TBD-6 retention period require confirmation.
UC-15	View daily time-per-zone summary Goal: Review daily time in assigned zones, other zones, and periods with location unavailable.	Direct Manager	Must	US-14	Summary totals should equal tracked working hours, as stated in the source story.
UC-16	Generate and export deviation reports Goal: Generate reports by employee, team, and period, and export the same figures with exporter identity and time.	HR Officer (provisional)	Should	US-15	HR role and export format/permissions require confirmation.
UC-17	Compare movement with attendance records Goal: View attendance beside first/last detected facility presence and flag days with attendance but no movement after the defined period.	HR Officer (provisional)	Should	US-16	Must remain reconciliation only, not a general attendance system; confirm TBD-7.
UC-18	Review suspicious location data Goal: Inspect evidence for impossible location jumps or signal loss so suspicious data can be investigated.	Security Officer (provisional)	Must	US-17	Security role and TBD-2/TBD-8 thresholds require confirmation.
UC-19	Review and resolve flagged events Goal: Keep flags marked “Needs review” until confirmed or dismissed, recording reviewer, time, and reason.	HR Officer / Responsible Reviewer (provisional)	Must	US-18	Define the authorized reviewer and decision process.

UC ID	Use case / goal	Primary actor	Priority	Traceability	Validation notes
UC-20	Review tamper-evident audit records Goal: Review who changed what and when, including prior values, and prevent audit entries from being edited or deleted.	Security Officer (provisional)	Should	US-19	Security role and audit-log access policy require confirmation.
UC-21	Manage role-based access Goal: Ensure users receive only data permitted by their role, restrict managers to their own teams, and log denied access attempts.	System Administrator (provisional)	Must	US-20	Administrator role and final permission matrix require confirmation.
UC-22	Manage user accounts and roles Goal: Create, deactivate, or change user roles; refuse access to inactive users and apply updated permissions at next sign-in.	System Administrator (provisional)	Must	US-21	Administrator role and account lifecycle rules require confirmation.
UC-23	Apply tracking scope restrictions Goal: Prevent location data from being stored or shown outside the defined facility or working hours.	System behavior; Employee is the affected stakeholder	Must	US-22	Cross-cutting constraint, not a conventional user-triggered use case; confirm handling of late-arriving data.
UC-24	Provide monitoring notice and correction process Goal: Provide written notice about collected data, purpose, access, and retention; log and answer correction requests.	Employee (recipient/requester, not system user); Responsible Reviewer TBD	Must	US-23	Define process owner, response expectations, and how employees submit requests.
UC-25	Apply data-retention rules Goal: Delete or anonymize movement data after the approved retention period while preserving records linked to open investigations.	System behavior; System Administrator role provisional	Should	US-24	Cross-cutting/scheduled behavior; confirm TBD-6 and investigation hold rules.
UC-26	Bind a tracking device to one employee Goal: Link each device to one employee, log reassignment/return, and hold data from unassigned devices for review.	System Administrator (provisional)	Must	US-26	Administrator role, device lifecycle, and review ownership require confirmation.

5. Traceability and Coverage Check

The draft contains 26 use case entries mapped across the 26 source user stories (US-01 through US-26). The mapping is direct for the listed story in each row; some use cases also support cross-cutting scope, access, privacy, or review constraints. This is a draft-level traceability check and does not mean that the requirements or actors have been approved.

Objective	Source objective	Supporting user stories	Draft use cases
O1	Track employee movement within the facility in real time	US-01, US-02, US-03, US-04, US-25	UC-01–UC-04, UC-13
O2	Record the locations employees visit	US-05, US-07, US-13	UC-05, UC-07, UC-14

Objective	Source objective	Supporting user stories	Draft use cases
O3	Record the time employees spend at different locations	US-07, US-13, US-14	UC-07, UC-14, UC-15
O4	Identify movement that may be inconsistent with assigned work area	US-02, US-05, US-06, US-08, US-09, US-11, US-12, US-15	UC-02, UC-05, UC-06, UC-08–UC-12, UC-16
O5	Reduce attendance manipulation/fraud through reviewable evidence	US-16, US-17, US-18, US-19, US-26	UC-17–UC-20, UC-26
O6	Support monitoring and accountability	US-01, US-04, US-09, US-10, US-13, US-14, US-15, US-16, US-18, US-19, US-21	UC-01, UC-04, UC-09, UC-10, UC-14–UC-16, UC-19, UC-20, UC-22

6. Decisions Required Before Team Approval

Decision ID	Decision / action required
D-01	Confirm provisional actors Decide whether HR Officer, Security Officer, and System Administrator are actual system roles; clarify whether Work-area Supervisor is in scope. The stakeholder register identifies the supervisor as a potential stakeholder, but the current user stories do not define a confirmed supervisor actor.
D-02	Approve access and responsibility boundaries Define role permissions, manager team scope, access to employee history, who can resolve flagged events, and who receives escalations/device alerts.
D-03	Confirm tracking and privacy policy Approve the employee notice and correction process, data access, retention period, investigation holds, and handling of location data received after shift end or facility exit.
D-04	Resolve TBD parameters Confirm TBD-1 through TBD-10 values and their operational meaning before acceptance criteria can be measured.
D-05	Validate use-case boundaries Decide whether system behaviors UC-23 and UC-25 should remain in the use case list or be represented as cross-cutting business rules / functional requirements instead.
D-06	Validate feature scope Confirm restricted-zone alerts, device-health alerts, device-to-employee binding, attendance reconciliation, anti-tampering review, and audit-log capabilities against the approved proposal and project scope.
D-07	Team approval and traceability Review all 26 mappings, verify that each relevant stakeholder goal is covered, approve the actor list and priorities, and record changes before treating Task 12 as complete.

7. Open Parameters from the User Stories

The source user-stories document explicitly treats TBD values as placeholders, not decisions. The team should resolve the following before final acceptance criteria and test targets are approved.

Parameter	Meaning in source	Related story
TBD-1	Maximum delay from a zone change to the live view (seconds)	US-01
TBD-2	Time without a valid location before “unavailable” or “signal lost” (seconds)	US-02, US-17, US-25
TBD-3	Time outside the assigned zone before an alert (minutes)	US-09
TBD-4	Maximum delay to deliver an alert (seconds)	US-09
TBD-5	Time before an unacknowledged alert is escalated (minutes)	US-10
TBD-6	Movement-data retention period (days)	US-13, US-24

Parameter	Meaning in source	Related story
TBD-7	Period without movement after recorded attendance before flagging (minutes)	US-16
TBD-8	Minimum time for an impossible jump between zones (seconds)	US-17
TBD-9	Location accuracy threshold (metres)	US-07
TBD-10	Low battery threshold (percent)	US-25

8. Review Status and Acceptance Checklist

Current status: Draft prepared for review. The document has not been team-approved; Task 12 should not be marked Completed until approval evidence is recorded.

- ☐ All use cases have a unique ID, goal, primary actor, priority, and source-story reference.
- ☐ All 26 source user stories US-01–US-26 are represented in the draft mapping.
- ☐ Management / Direct Manager is treated as the only confirmed system user.
- ☐ Provisional roles and scope-sensitive features are visibly flagged for confirmation.
- ☐ Cross-cutting system behaviors are distinguished from conventional actor-triggered interactions.
- ☐ Team has reviewed the list, resolved scope/actor decisions, and approved the final version.
